USGS topographic maps showing locations of reconnaissance plots (forest and meadow) and permanent forest-meadow ecotone transects in and adjacent to the Three Sisters Biosphere Reserve/Wilderness Area

Topographic maps were scanned in sections (upper middle, middle right, etc.). Red numbered points are forest reconnaissance plots; yellow numbered points are meadow reconnaissance plots; red numbered lines are ecotone transects. UTMs and elevations for transect endpoints are included in entity 11 of the TP064 database (https://andlter.forestry.oregonstate.edu/data/abstract.aspx?dbcode=tp064)
