## COOPERATIVE SNOW INVESTIGATIONS

---

### HYDROMETEOROLOGICAL LOG OF THE WILLAMETTE BASIN SNOW LABORATORY

1947-1948 and 1948-1949 WATER YEARS

---

#### INTRODUCTION

1. General. This hydrometeorological log has been referred to previously in progress reports as Technical Report 21. It is essentially a presentation of basic observational data from the Willamette Basin Snow Laboratory of the Cooperative Snow Investigations of the Corps of Engineers (Department of the Army) and the Weather Bureau (Department of Commerce).

The background, organization, and objectives of this program along with brief descriptions of each of the three field laboratories, and tables showing the instrumentation and observational program, are given in Technical Report 6-4 of the Cooperative Snow Investigations.

2. Laboratory Area. a. Basin Map. A map of the Willamette Basin Snow Laboratory is included, showing topography, drainage, and the location of trails and observational stations. The map was prepared from aerial photographs, with controls and interpretations as noted on the map (page 7).

b. Terrain Parameters. On page 8 is a table on which are shown the terrain parameters for each station. Definitions of each of these parameters are given at the bottom of the summary table.

c. Station Site Maps. On pages 9-23 are site maps for stations 1 - 32 and for station 35, which have been prepared from field sketches. The scale of these maps is indicated, and the maps show the nature of the terrain and the exposures of the precipitation gages and snow courses.

d. Aerial Photographs. On pages 24-26 are aerial photographs of station sites which should be compared with the field sketches of station sites. Scale is indicated, as well as the location of each station. Some stations which are shown were not active.

during the period of this log; these stations will be indicated by an asterisk beside the station number in the index which follows.

| <u>Page 24:</u> | <u>Station #</u> | <u>Type</u>          | <u>Remarks: location, elevation</u>          |

|                 | *36              | Ground water well    | Upper Mann Creek; elev. 3969'                |

e. Photographs of Stations and Instruments. On pages 27-31 are photographs showing some of the stations, instruments, and observational conditions in the Willamette Basin Snow Laboratory. Short descriptions of these photographs follow with the numbers of the photographs indicated.

1. Panorama of the basin showing the typical forest cover (about ninety per cent), taken from Squaw Mountain looking WSW, with Wolf Rock at extreme left. (August 6, 1948)
2. View of Carpenter Mountain, looking SE from East Bear Pass.
3. Bear Pass Road along Squaw Mountain. Elevation 4550 feet. (January 20, 1948)
4. Bear Pass Road near the seven mile post. Elevation 4400 feet. (January 15, 1948)
5. Station 2, looking north. (March, 1950)
6. Duraluminum Sacramento-Type Tower, 25 feet high, supporting 96" Stevens Gage at Station 6. Looking NW. (July 24, 1949)
7. Same station (Station 6), looking SW. (March, 1950)
8. Close-up showing typical mounting of instruments on tower. Station 21, looking SW. Note dense forest surrounding instrument and the slope of the terrain.
9. Station 8 at Wolf Meadow, looking NE. (March, 1950)
10. Observer at Station 33, looking west. (March, 1950)
11. Same station (Station 33) in background, looking north. (March, 1950)
12. Observer taking snow measurements at Station 16, ESE of Squaw Mountain. Station 15 in background showing Sacramento Type-B 200" storage gage used during period of this log. (April, 1948)
13. Observers taking snow measurements at Station 1C. (March, 1950)
14. Station 15, looking south. (December 11, 1947)
15. Meteorological station at Headquarters, Station 1A. (January, 1948)
16. Stations 31, 32, looking north. (March, 1950)
17. Observer at Station 36, Ground Water Well. (March, 1950)
18. Station 5, Rain gage.
19. Friez Tower at Headquarters Station, Station 1A. Note deflection of horizontal members of tower, due to projection condition of loading during the settlement of the snowpack. (July 23, 1949)
20. Looking upstream at Mann Creek Gage. (July, 1949)
21. Looking upstream at Blue River Gage. (July, 1949)

3. Observational Program. a. Instrumentation. A summary of the observational program is given on page 32 showing the elements observed and the number and type of instruments used each of the two seasons covered by this report.

b. Bar Chart. On page 33 is a bar chart showing on a time scale the period of record and the status of the data, including the height above ground of precipitation gages and the number of points in each snow course.

4. Processing and Organizing of Data. The data in this log are presented in sections, largely on a basis of elements. Each section corresponds to a portion of this narrative in which the data are briefly described. Where applicable, brief statements are included on the quality of the data and on any unusual observational conditions. In general, daily means, ranges, or totals of each available element are included for the period of record, 1 October 1947 to 30 September 1949, with hourly data being shown for selected portions of this period. There are a few photographs, and figures showing the relationships of certain combinations of elements.

The data reduction, transcription, computation, and related processes used in the preparation of this log have been controlled by random and stratified verification to produce the maximum volume of acceptable data. The tolerance which, in general, is that described in the manual of procedures of the Cooperative Snow Investigations, is based on the inherent characteristics of the instruments and observational methods, and is consistent with standard scientific and observational practice. Insofar as is practicable, values are estimated or interpolated where objective evidence is available in order to fill occasional gaps in the record.

5. Synopsis of Hydrometeorological Data. On page 34 the concurrent values of significant hydrometeorological elements for the 1947-1948 season are given on a time scale, October through June. On page 35 are similar data for the 1948-1949 season.

6. Data for Significant Periods of Streamflow. Data on streamflow, precipitation, temperature, daily snowfall, and snow depth are given on an expanded time scale for the following periods of the 1948-1949 season (page 36): 2-15 October 1948; 5-22 December 1948; 26 April through 6 May 1949; and 7-21 May 1949.

The tables on pages 37-41 give hourly values of air temperature at Eugene, Oregon; precipitation at Station 1B; and streamflow at Blue River, Mann Creek, and Wolf Creek for these significant periods of streamflow.

7. Precipitation, Snow, and Streamflow Data. On pages 42-43 are tables showing seasonal summaries of temperatures, monthly precipitation, and streamflow for the Willamette Basin Snow Laboratory stations and for the other stations mentioned below. Temperatures are given for the Headquarters Station (Station 1) of the laboratory and for McKenzie Bridge, Oregon, a nearby Weather Bureau cooperative station.

The 27-year monthly mean temperatures for McKenzie Bridge, Oregon, are included with the 1947-1948 data.

Monthly precipitation data for each laboratory station and for McKenzie Bridge, Oregon, are given along with the mean monthly precipitation figures for the stations indicated. The monthly precipitation data are based on mass curves derived from the data recorded from Sacramento Type-B 200" storage gages. The storage precipitation data for the 1948-1949 season are unreliable due to unsatisfactory weigh-outs. The 27-year monthly mean precipitation data for McKenzie Bridge, Oregon, is included with the data for 1947-1948.

The chart on page 44 shows by ordinates the values of the mean monthly streamflow for Blue River, Mann Creek, and Wolf Creek, with the monthly precipitation at the Headquarters Station, and by superimposed curves, the mean monthly temperature for Station 1A for the year 1948-1949.

On page 45 is a summary of the seasonal catch of storage gages for the year 1947-1948. The catch at Stations 12 and 15 appears deficient as compared with the catches at the other stations and with values of snowpack water equivalent nearby. The deficiency of the catch at these stations may be ascribed partly to the extreme steepness of the terrain at the stations, where strong updrafts prevail during storms. The stick measurements early in the season are not precise measures of precipitation due to the large ratio of the area of the bottom of the gage to that of the orifice.

These storage gage data were used in computing, from mass curves of available recorder data, the monthly precipitation values given in the tables on pages 42-43. Mass curves were made from the available stick readings and other data for 1948-1949, and adjustments were made and used in providing the values for the table on page 43.

Daily frequencies of precipitation at Headquarters Station (Station 1) are given on page 39. The record begins in November, 1947; the phase of precipitation was not reported until January, 1948. It may be noted that measurable precipitation occurred on about half the days during the period covered.

Major precipitation periods, showing the duration, total precipitation and the maximum daily and hourly rates of precipitation, are given on page 47.

A summary of the hourly precipitation at Station 1B, Headquarters Station, is given on pages 48-71 for the period October, 1947, to September, 1949. Special notice should be given to the symbols indicating estimated values, accumulations, and other irregularities. Details on the exposure of this and other stations may be found by referring to the site maps and table of terrain parameters.

Snow data are given in four sections. The first section, page 72, covers the 1947-1948 season for selected observations at Station 1C, and for the observations at stations 2, 3, 4, 7, 9, 13, 16, and 19 for the mean depth and the range of depths. The second section, page 73, covers the 1947-1948 season for Station 1C for the mean depth and the range of depths. The third section, pages 74-77, covers the 1948-1949 season for stations 2, 3, 4, 7, 13, 16, 17, and 19 for water equivalent, density, and mean depth of snow, and for standard deviation and standard error. The fourth section, pages 78-79, covers these elements for Station 1C for the 1948-1949 season. The data on water equivalent and density for the 1947-1948 season were unreliable because of difficulties in taking adequate cores. For Station 1C daily data are presented for portions of each season. For the other stations the observations are made about twice each month.

Tables of six-hourly precipitation at Station 2 for January, 1949, through September, 1949, are given on pages 80-82.

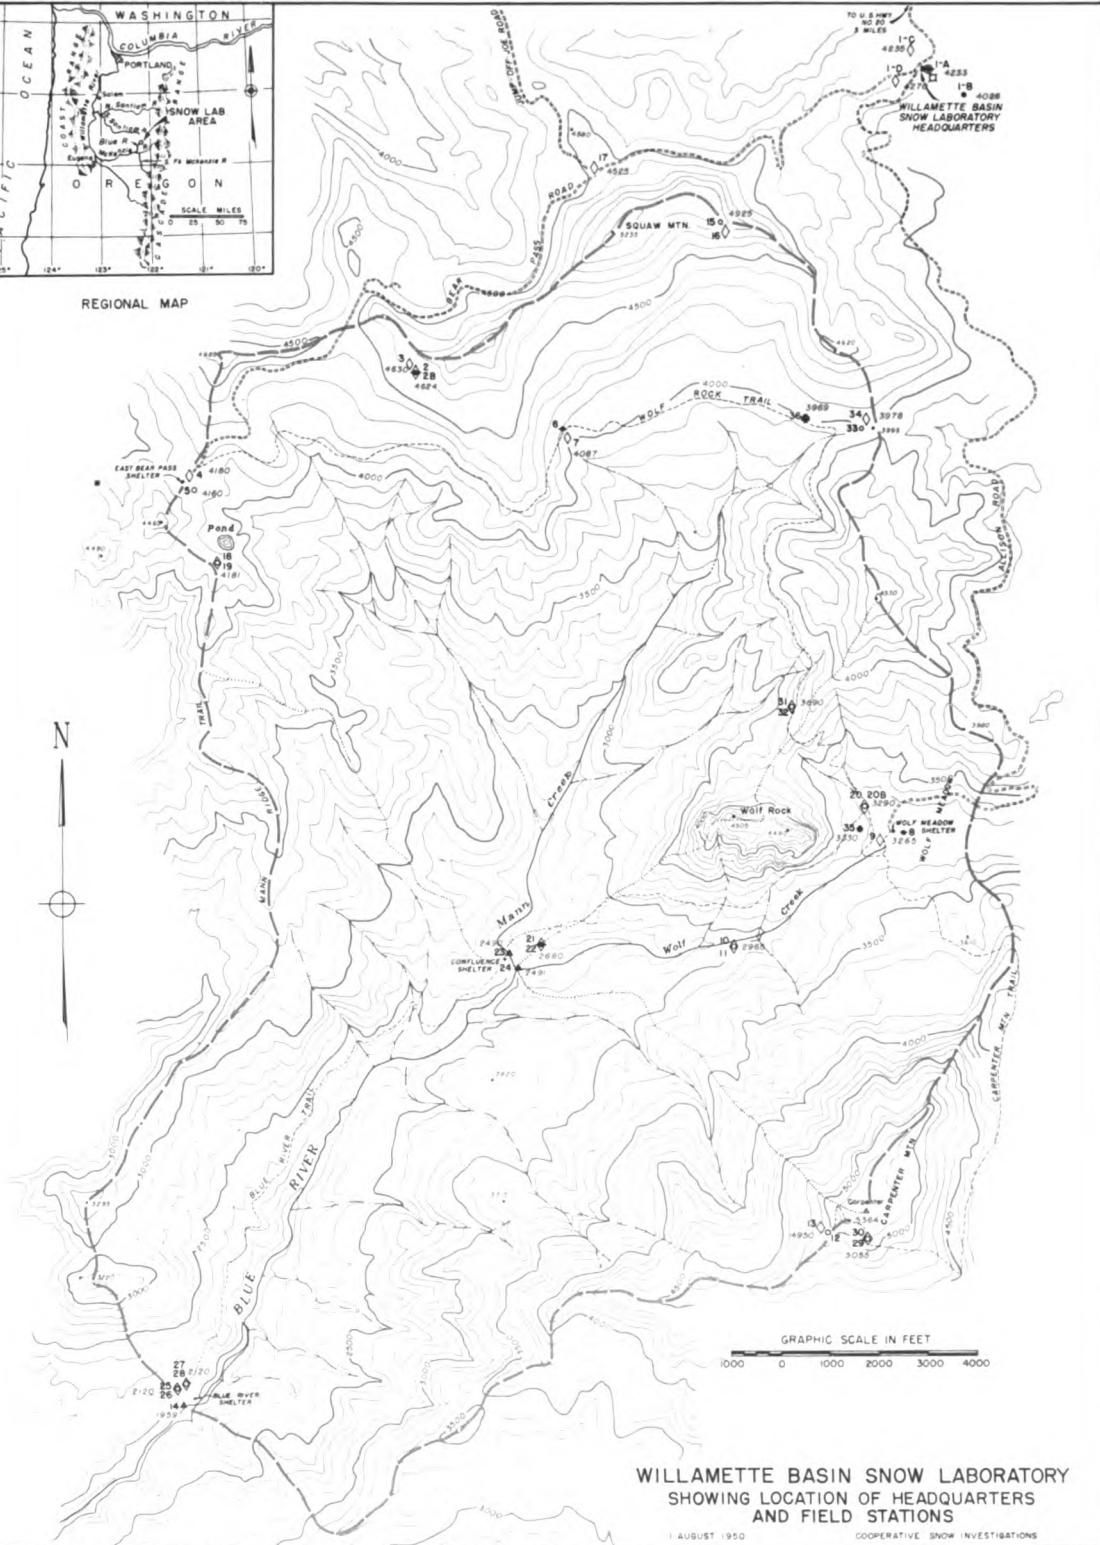

On pages 83-86 are four tables showing the mean daily streamflow for Blue River during the 1947-1948 and 1948-1949 seasons and for Mann Creek and Wolf Creek for 1948-1949. These streamflow stations have been established, through a transfer of funds from the Corps of Engineers, by the United States Geological Survey. Although many of the measurements are made by Corps of Engineer employees, the USGS reduces the data and computes the streamflow. These streamflow data are provisional at the time of publication of this log.

8. Table of Daily Values of Hydrometeorological Elements. On pages 87-107 are the daily values, where available, for January, 1948, through September, 1949, for the following elements and stations: current weather, maximum and minimum temperatures, dew point temperatures and wind direction at 1600 PST, and snowfall at Station 1A; precipitation at Station 1B taken from midnight to midnight; depth, water equivalent, and density of the snowpack at Station 1C; and streamflow for Blue River, Mann Creek, and Wolf Creek. The dewpoint temperatures are computed by Weather Bureau psychrometric tables from wet and dry-bulb temperature observations or from hygrothermograph records.

9. Upper Air Data. A table of air temperature, wind direction and wind speed at the 700 millibar level for Medford, Oregon, 1500 GMT, October, 1947, to June, 1949, is given on page 108.

## GENERAL NOTES:

1. ORIENTATION: Part of horizon having no land over 100 ft. above the station within a half-mile radius, measured clockwise from N° North.
2. SLOPE: Increase in elevation per unit horizontal distance expressed in percent. Slopes given are the maximum at a given station stated to the nearest 5%.
3. ASPECT: Direction of maximum slope measured clockwise from N° North.
4. CURVATURE: Convex + Concave - Neutral 0
5. OPEN AREA: 0 - Less than an acre of open ground surface  
1 - One acre to less than three acres of open ground surface  
2 - Three acres to less than eight acres of open ground surface  
3 - Eight acres or greater of open ground surface

**HOURLY VALUES OF AIR TEMPERATURE, PRECIPITATION, AND DISCHARGE  
FOR PERIODS OF SIGNIFICANT STREAM RISE**

5 DEC. - 22 DEC. 1948

*Data from Eugene, Oregon, Weather Bureau First Order Station, Elevation 364 ft., 51 miles NW of laboratory area.  
In the last column headed "Day":*

Temperature above age Max.

Temperatures shown are Max. and Min. at Laboratory Headquarters (Station 1A) from Max. and Min. thermometers read at 1600 daily.  
Precipitation - Daily totals.

Precipitation - Daily totals.  
Discharge - Daily means from

HOURLY VALUES OF AIR TEMPERATURE, PRECIPITATION AND DISCHARGE  
FOR PERIODS OF SIGNIFICANT STREAM RISE

26 APR. - 6 MAY 1949

In the last column headed "Day":

Temperatures shown are max. and min. from thermographs at the stations indicated at left of page.

Precipitation = Daily total

Discharge - Daily means from U.S.G.S. unpublished records. These will not necessarily agree with means of hourly values listed here.

**HOURLY VALUES OF AIR TEMPERATURE, DEW POINT, PRECIPITATION AND DISCHARGE  
PERIODS OF SIGNIFICANT STREAM RISE**

7 MAY - 21 MAY 1949

In the last column headed "Day":

Temperatures shown are max. and min. from thermographs at the stations indicated at left of page.

Precipitation - Daily totals

Discharge - Daily means from U.S.G.S. unpublished records. These will not necessarily agree with means of hourly values listed here.

In the last column headed "Day":

Temperatures shown are max. and min. from thermographs at the stations indicated at left of page.

Precipitation - Daily totals

Discharge - Daily means from U.S.G.S. unpublished records. These will not necessarily agree with means of hourly values listed here.

Monthly Values:  
STATION NUMBER 18  
Date: November  
Year: 1947

Reduced by: Willamette Basin Snow Laboratory  
Verified by: Precipitation, inches, Standard Rain Recorder  
Cooperative Snow Investigations

REMARKS: / - / Indicates period of unknown distribution with total on last hour. Single dagger used if time of beginning unknown.

READINGS TAKEN ON THE HOUR. AMOUNT OF PRECIPITATION SINCE PREVIOUS HOUR UNLESS INDICATED OTHERWISE.

Monthly Values:  
 STATION NUMBER  
 1 B  
 Date: May  
 Year: 1948

Verified by:

Laboratory: Willamette Basin  
 Snow Laboratory  
 Precipitation, inches, Standard Frost Recorder

REMARKS:  $\neq$  -  $\neq$  Indicates period of unknown distribution with total on last hour. Single dagger used if time of beginning unknown.

Reduced by:

Laboratory: Willamette Basin  
Snow Laboratory

Verified by:  
Date: Precipitation, inches, Standard Friesz Recorder

STATION NUMBER  
1 B

Monthly Values:  
May  
Year: 1949

REMARKS:  $\neq$  -  $\neq$  Indicates period of unknown distribution with total on last hour. Single dagger used if time of beginning unknown.
