

FUSION Cover Parameters
Cell size = 30 m
Heightbreak for canopy closure = 1 m
All returns

Canopy Closure
(percent)

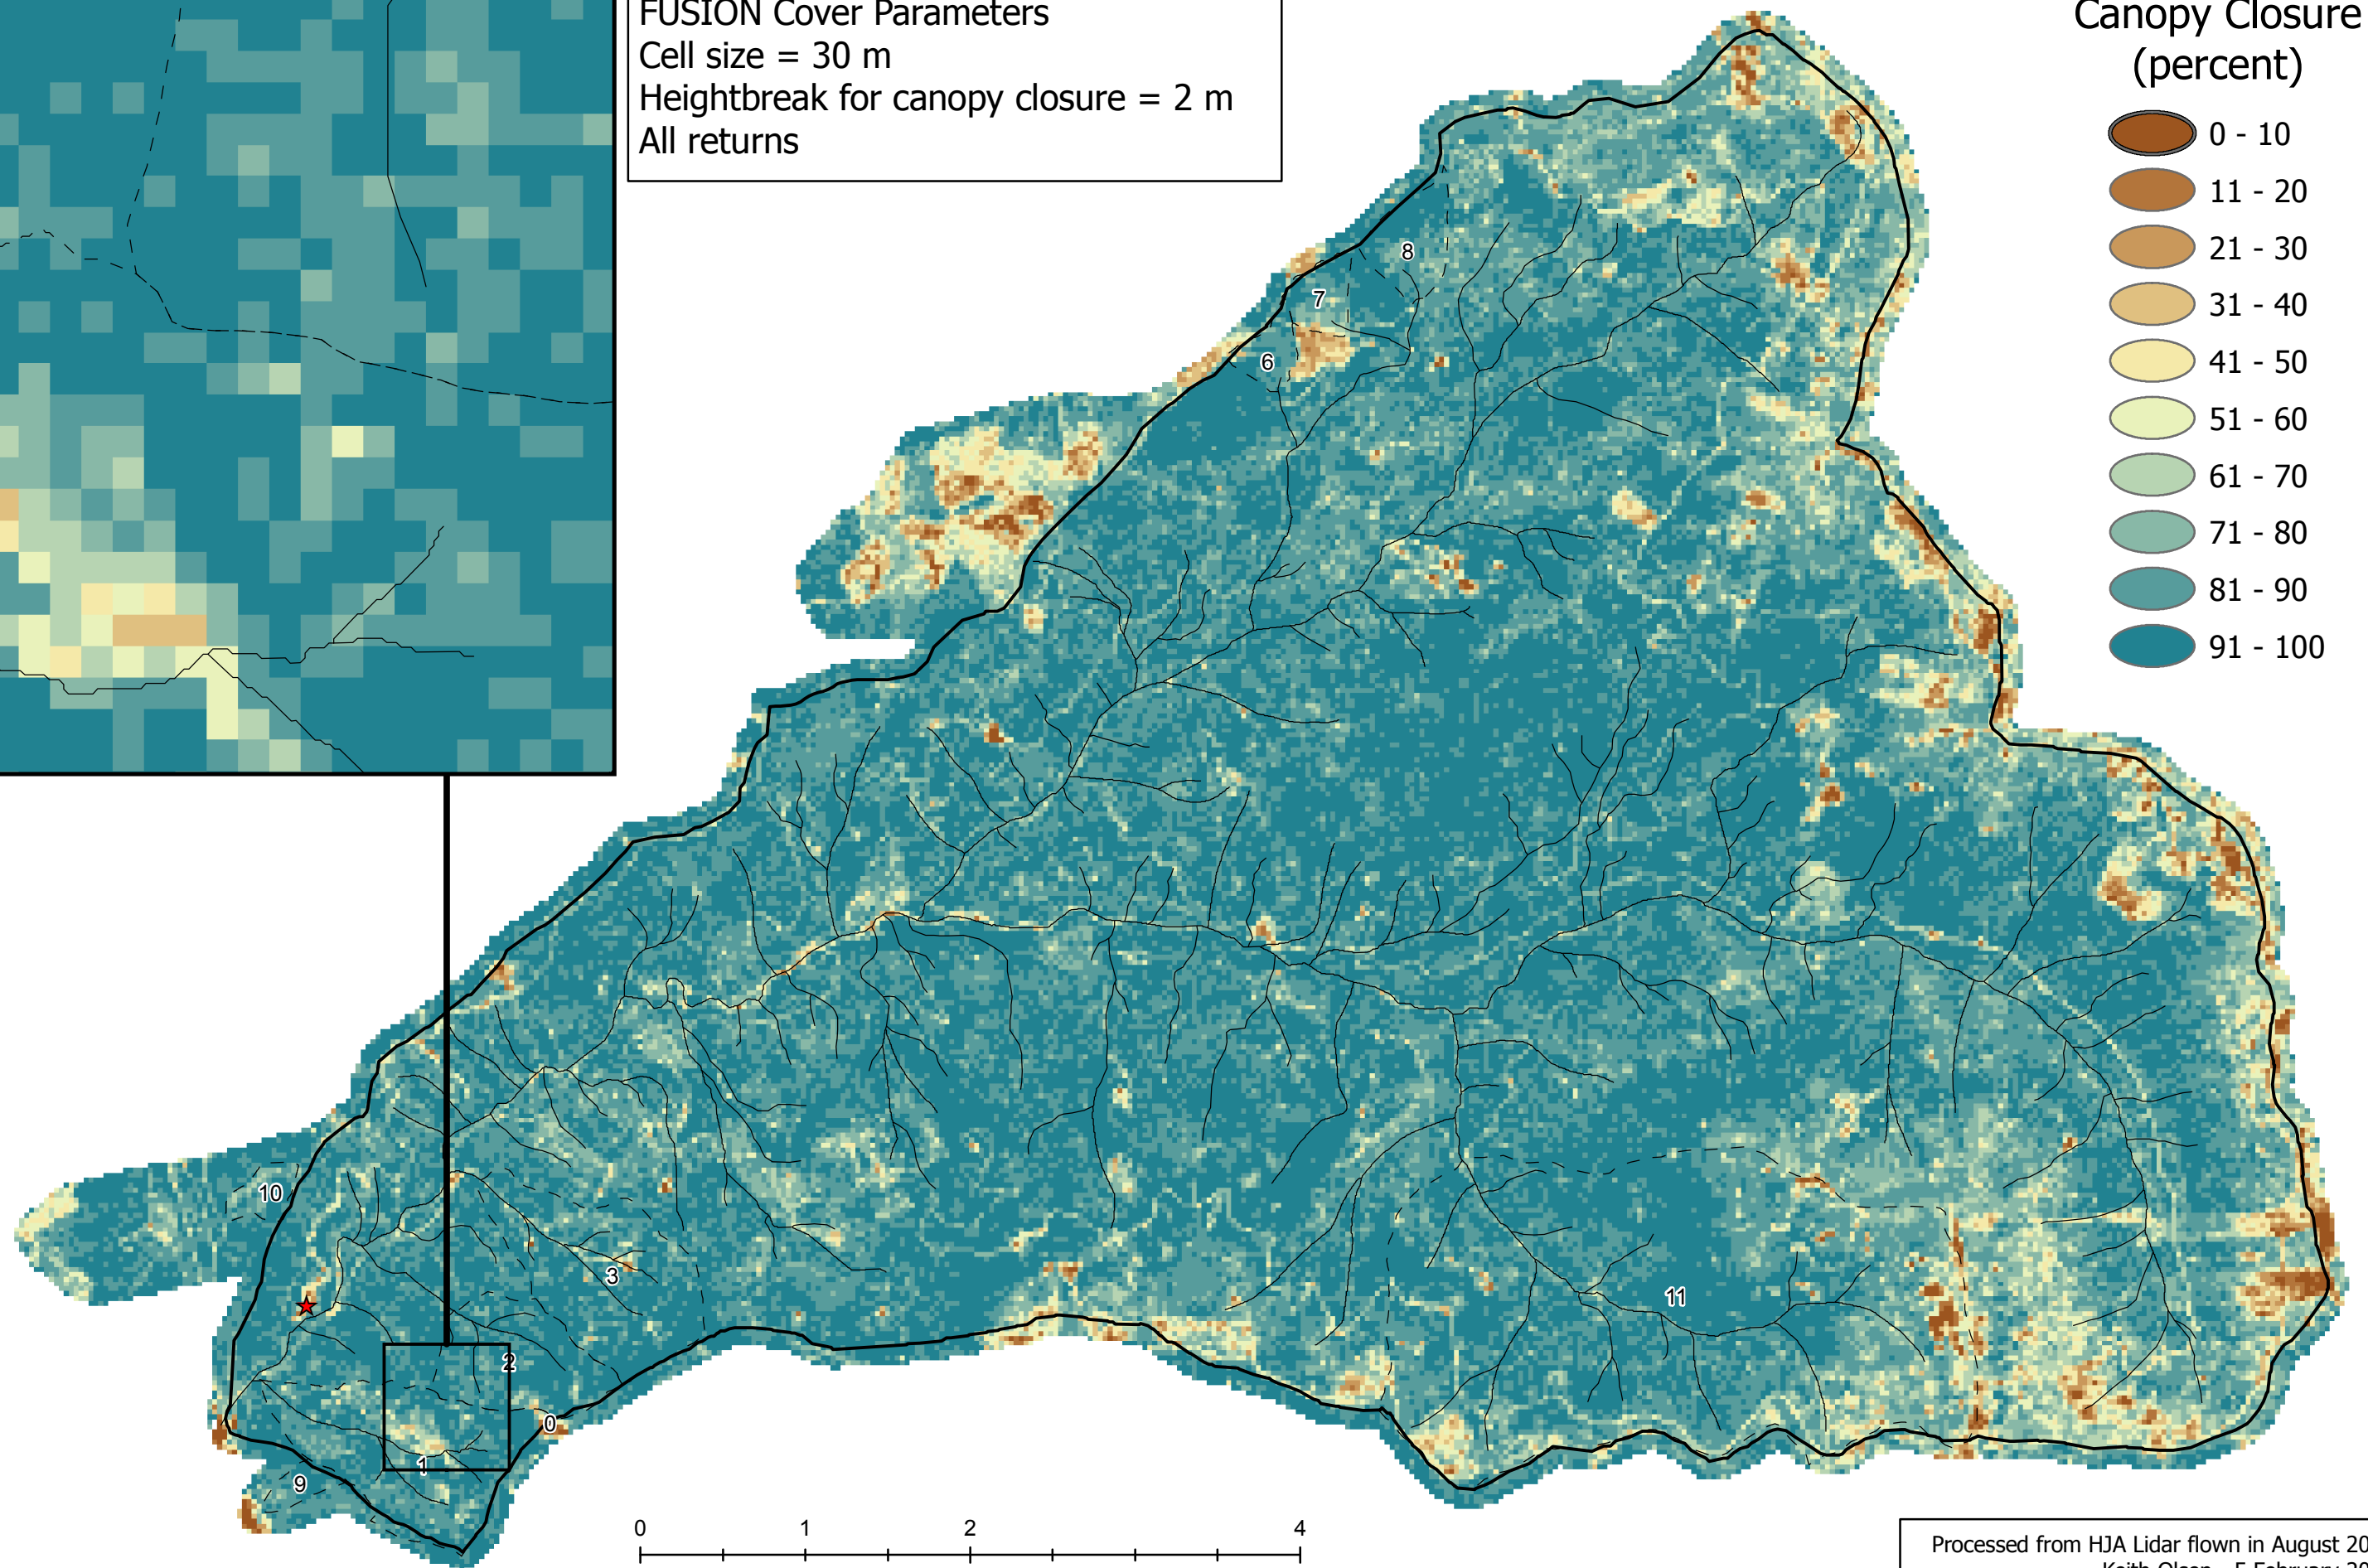

Processed from HJA Lidar flown in August 2008
Keith Olsen - 5 February 2010
Universal Transverse Mercator, zone 10, NAD83

FUSION Cover Parameters
Cell size = 30 m
Heightbreak for canopy closure = 2 m
All returns

Canopy Closure
(percent)

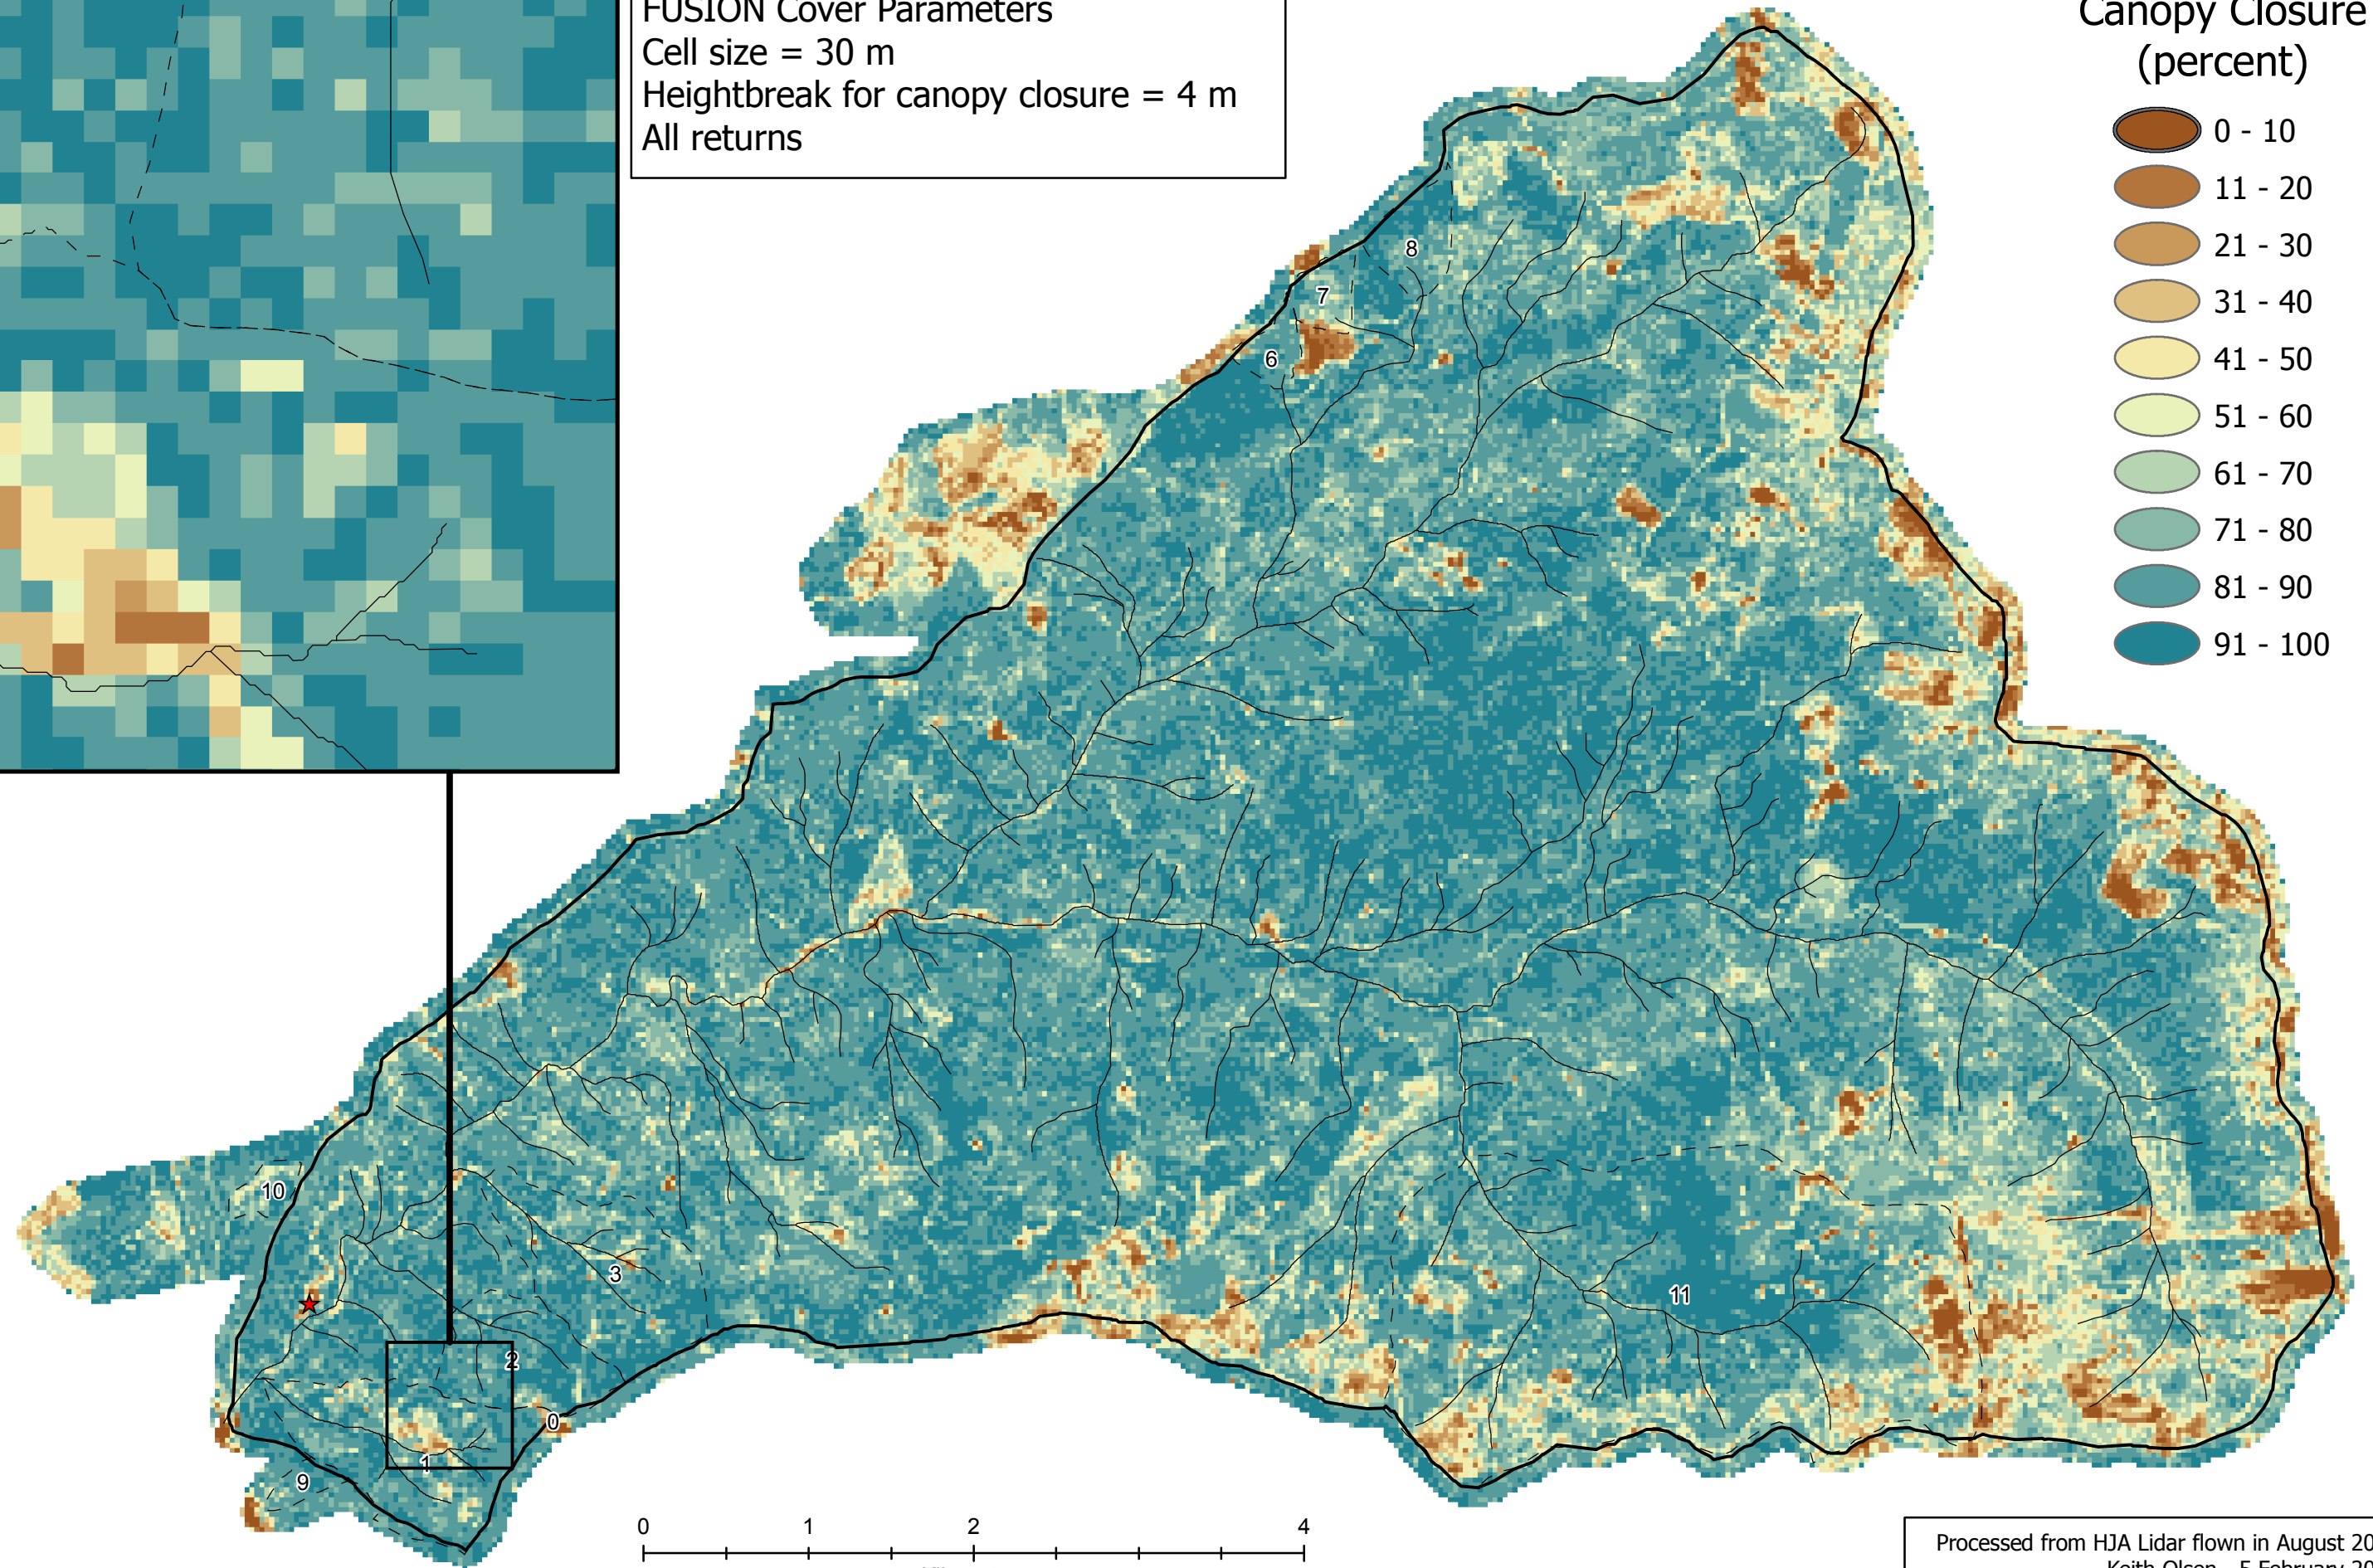

Processed from HJA Lidar flown in August 2008
Keith Olsen - 5 February 2010
Universal Transverse Mercator, zone 10, NAD83

FUSION Cover Parameters
Cell size = 30 m
Heightbreak for canopy closure = 4 m
All returns

Canopy Closure (percent)

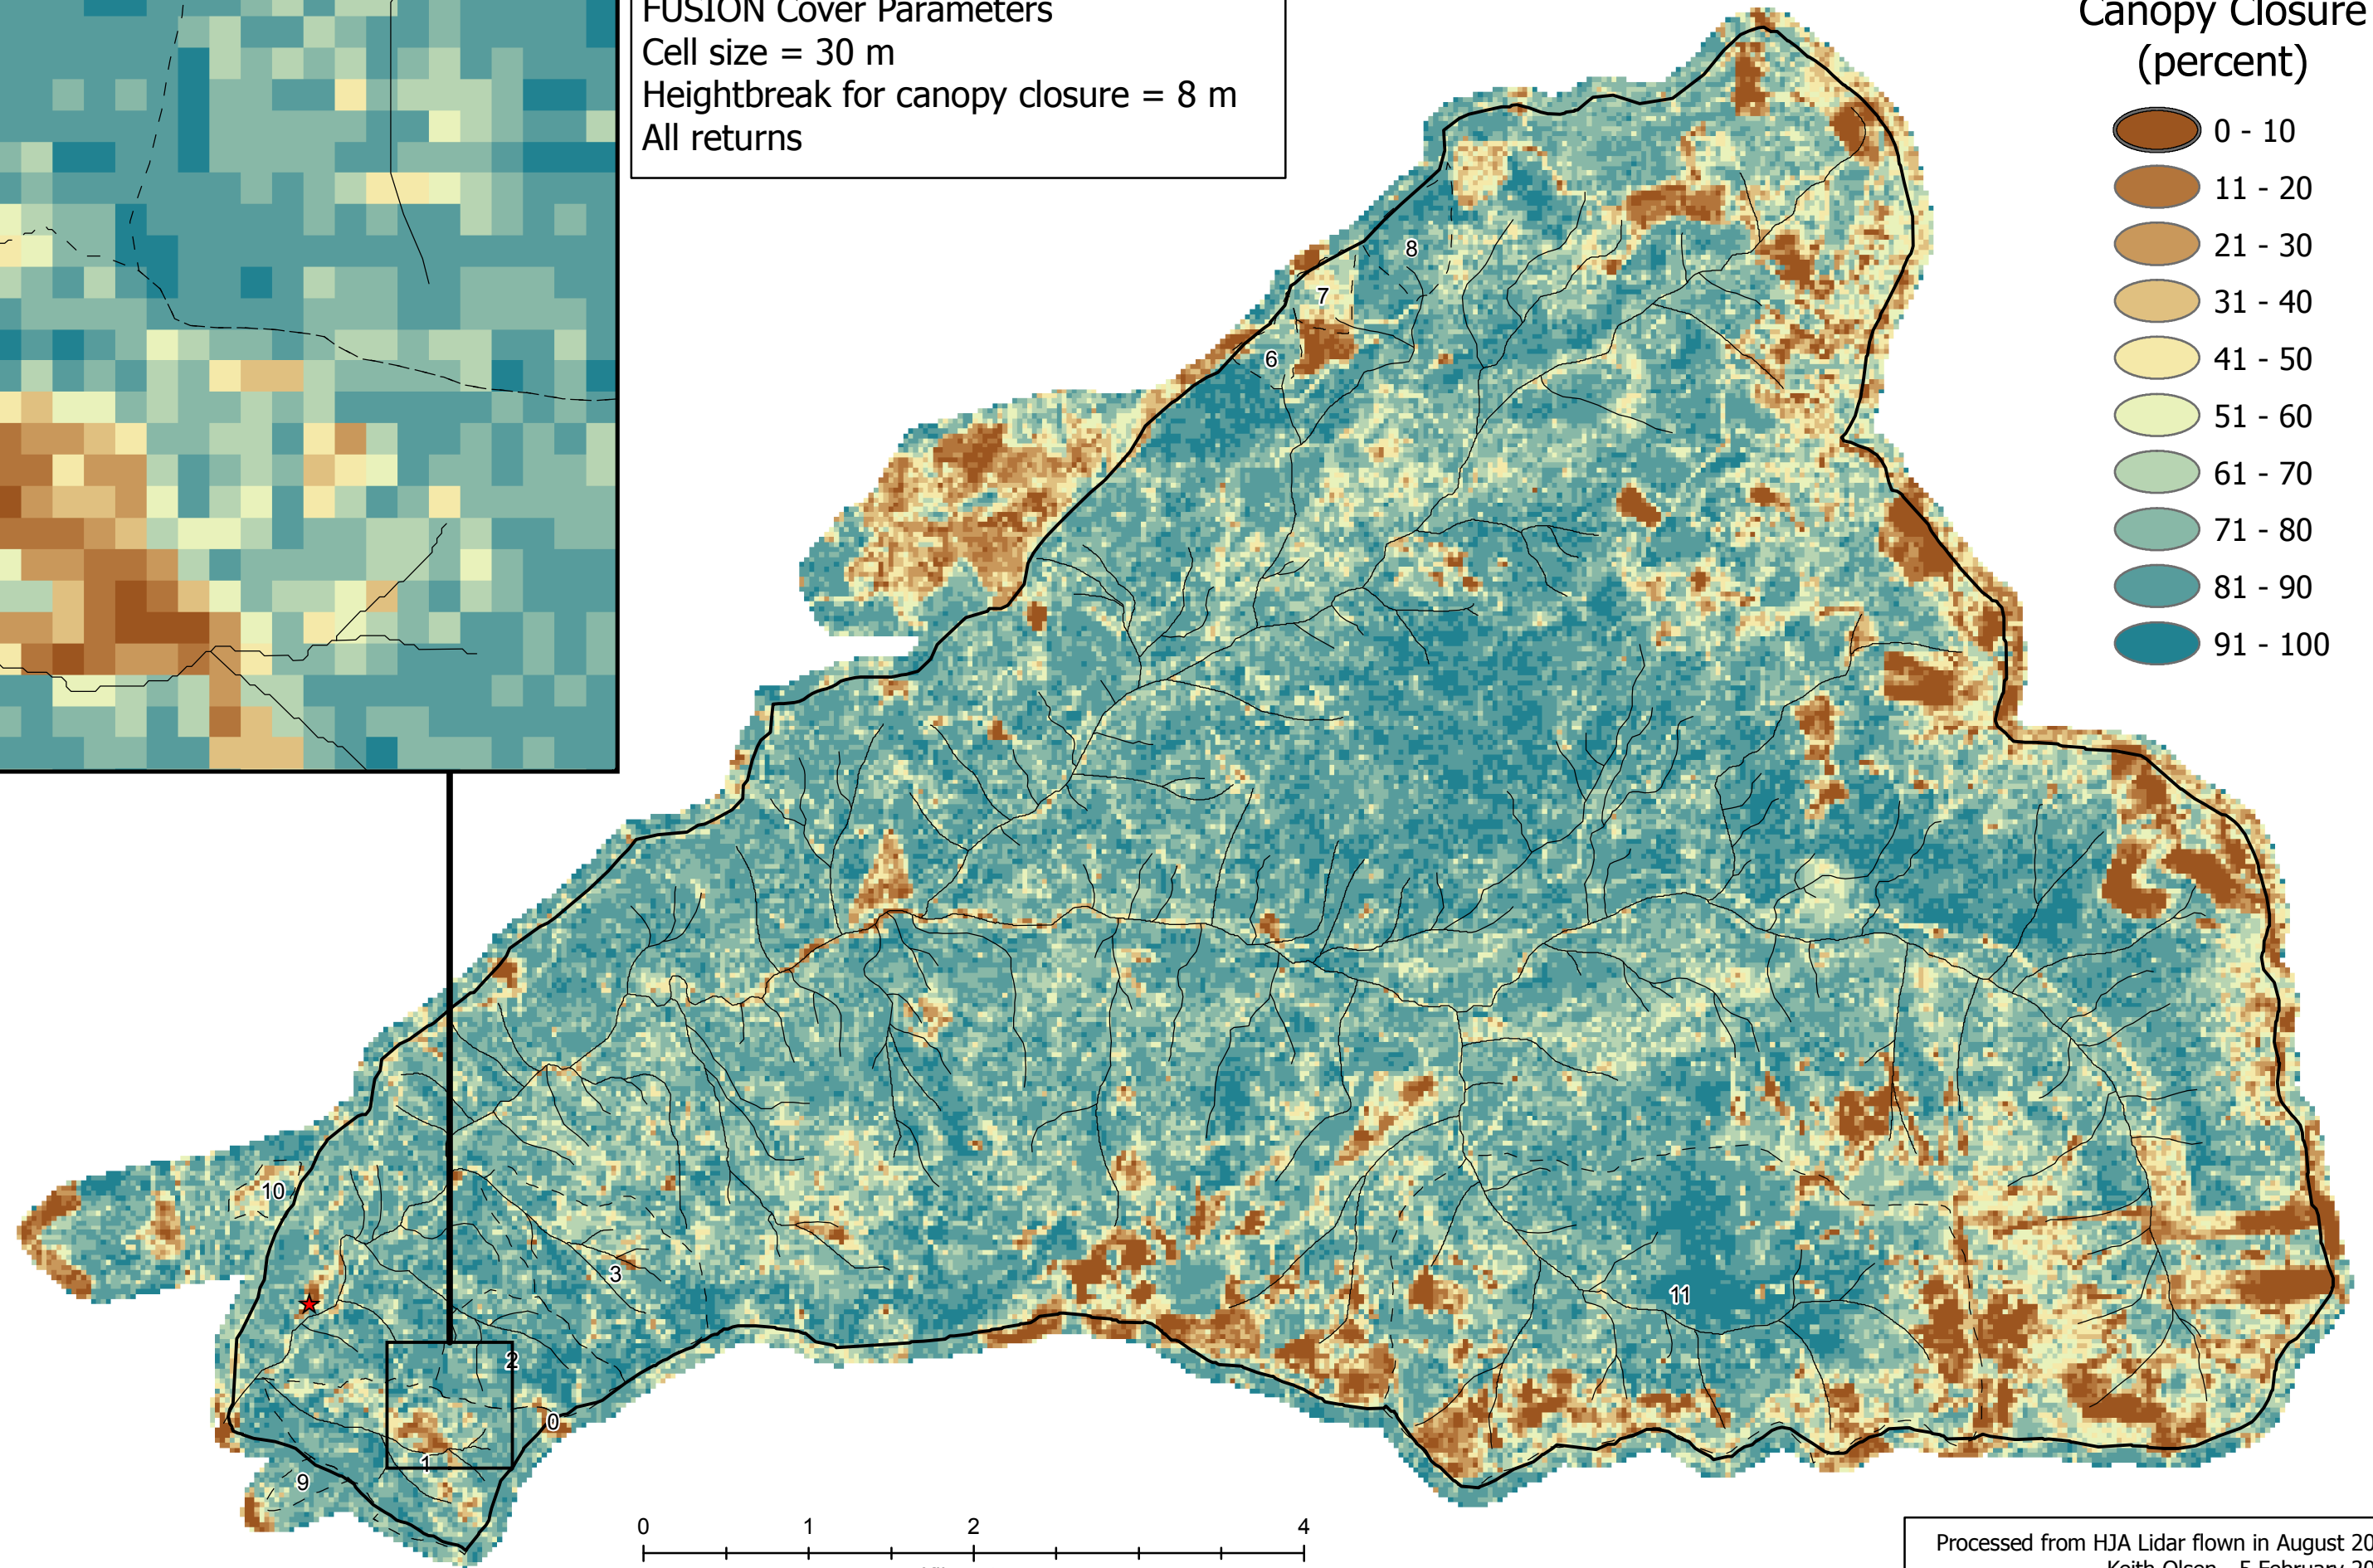

0 1 2 4
Kilometers

Processed from HJA Lidar flown in August 2008
Keith Olsen - 5 February 2010
Universal Transverse Mercator, zone 10, NAD83

FUSION Cover Parameters
Cell size = 30 m
Heightbreak for canopy closure = 8 m
All returns

Canopy Closure
(percent)

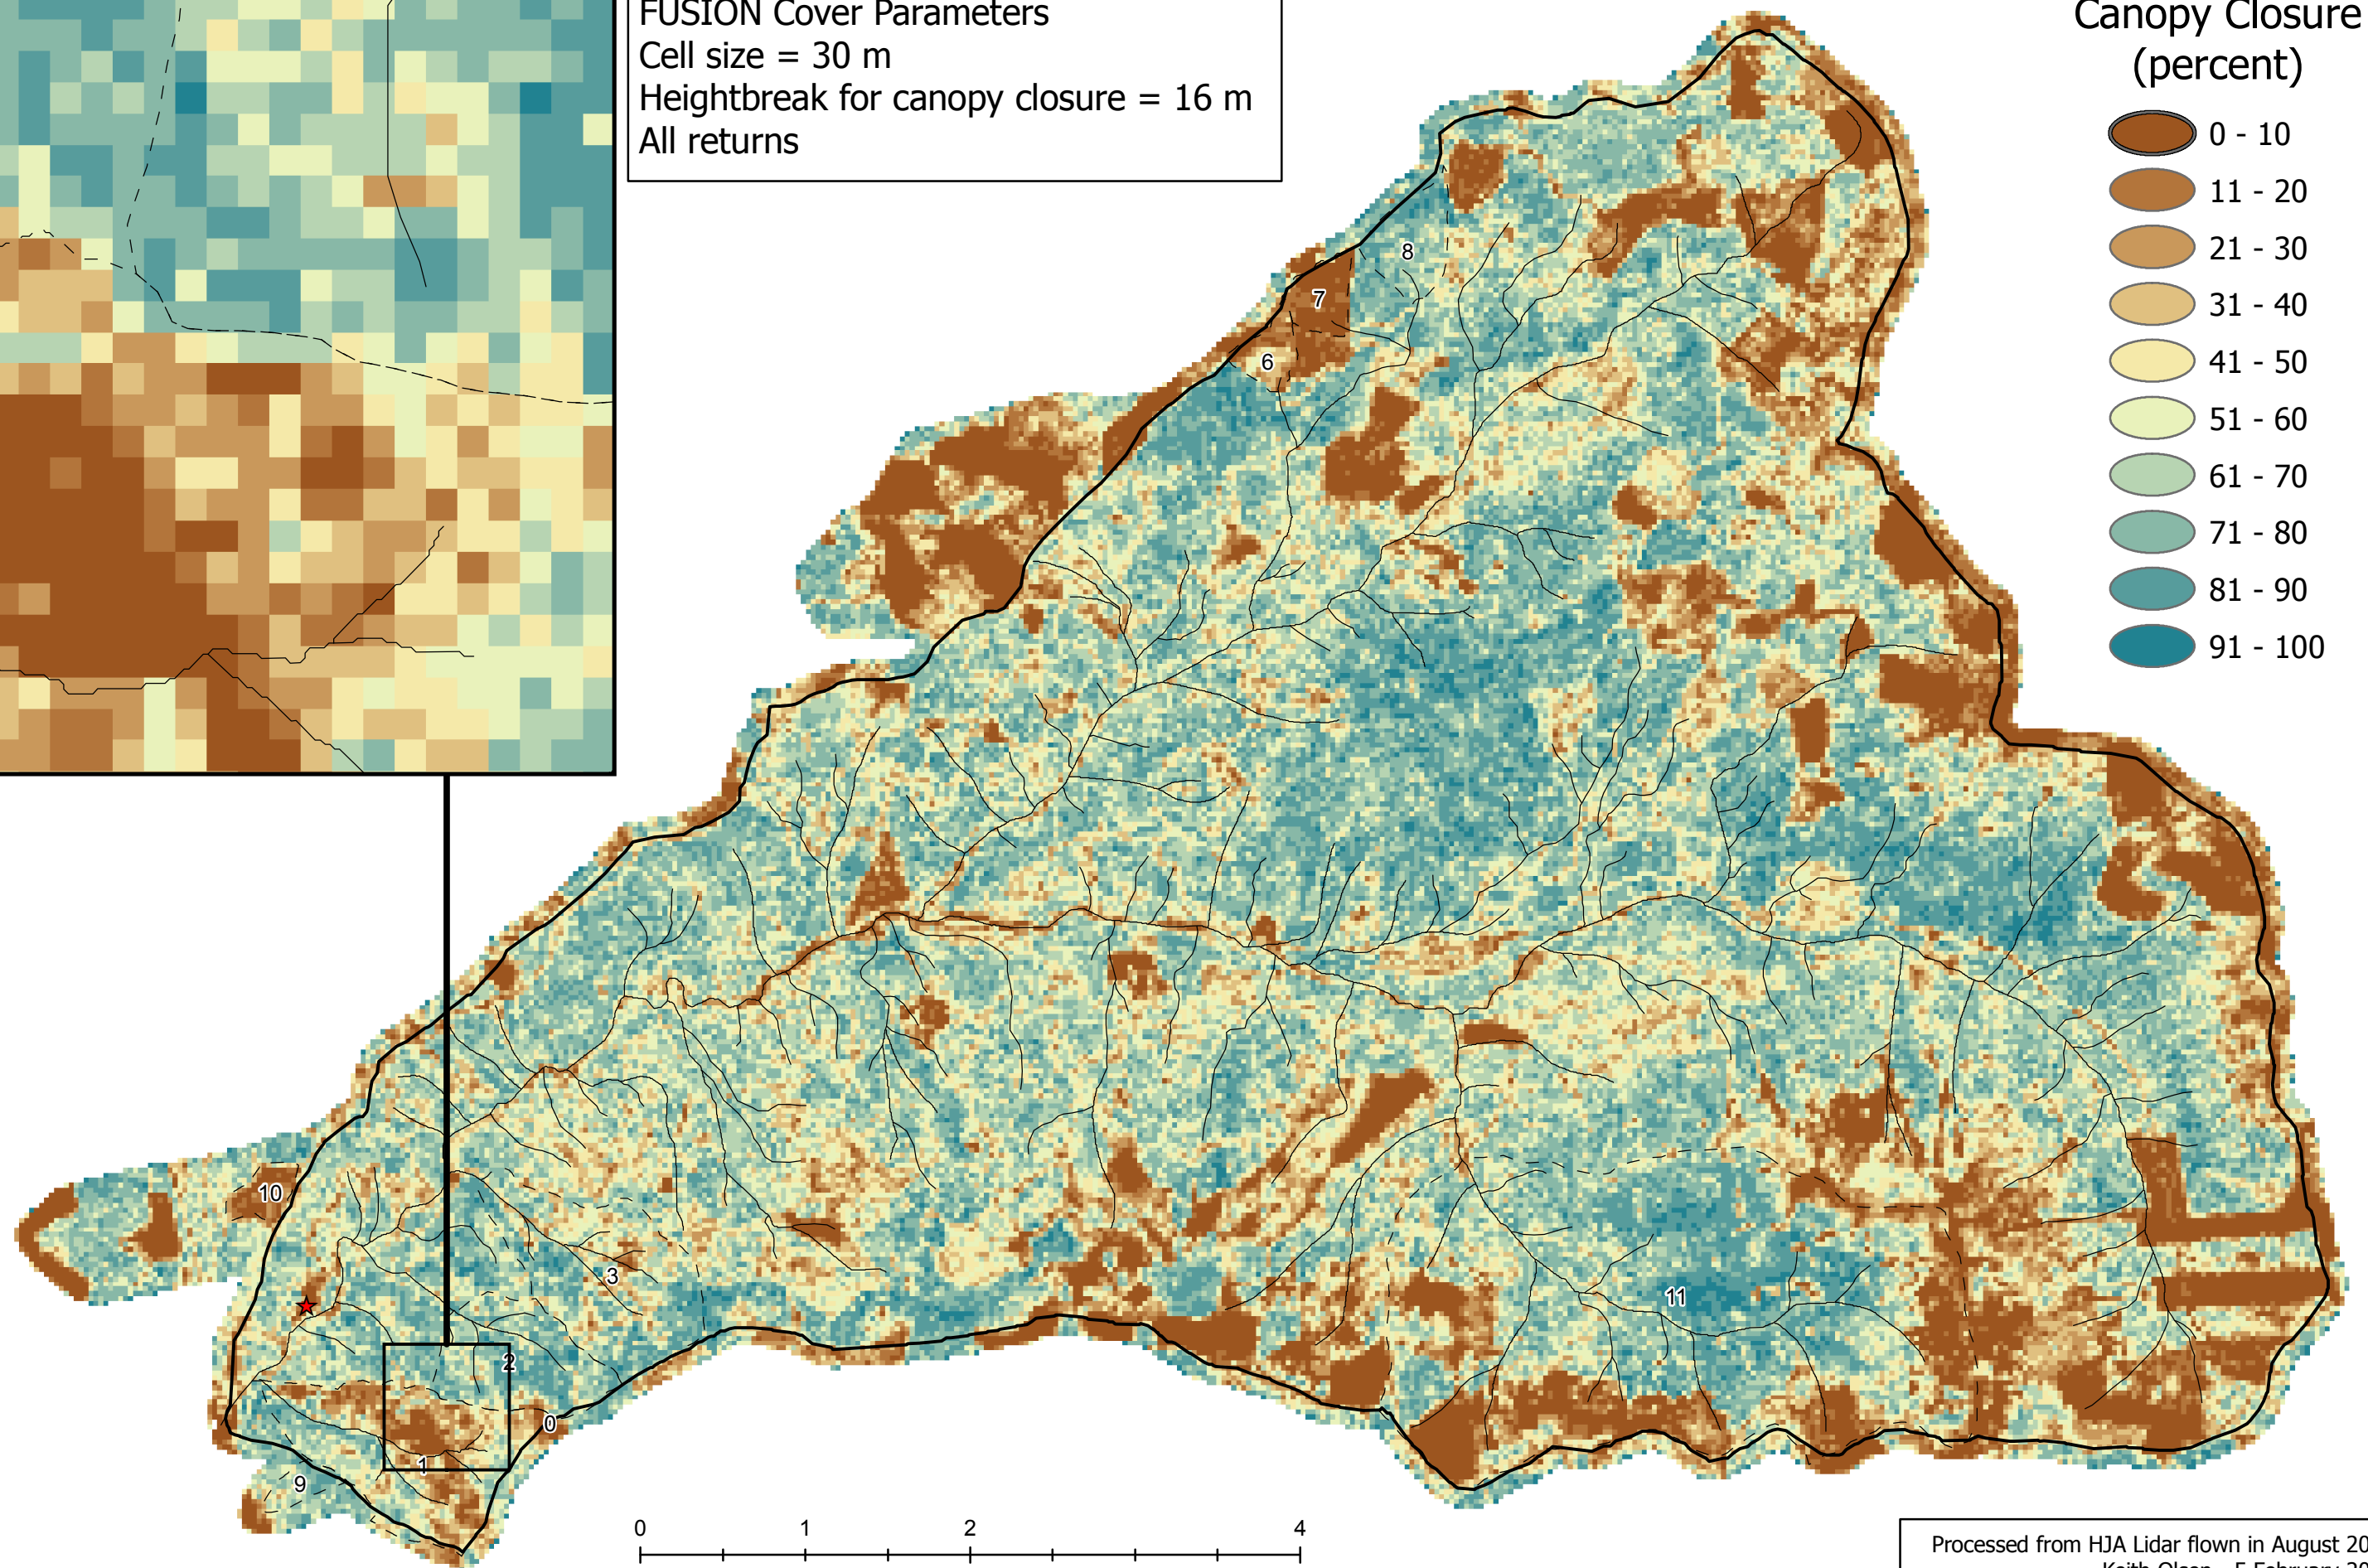

Processed from HJA Lidar flown in August 2008
Keith Olsen - 5 February 2010
Universal Transverse Mercator, zone 10, NAD83

FUSION Cover Parameters
Cell size = 30 m
Heightbreak for canopy closure = 16 m
All returns

Canopy Closure (percent)

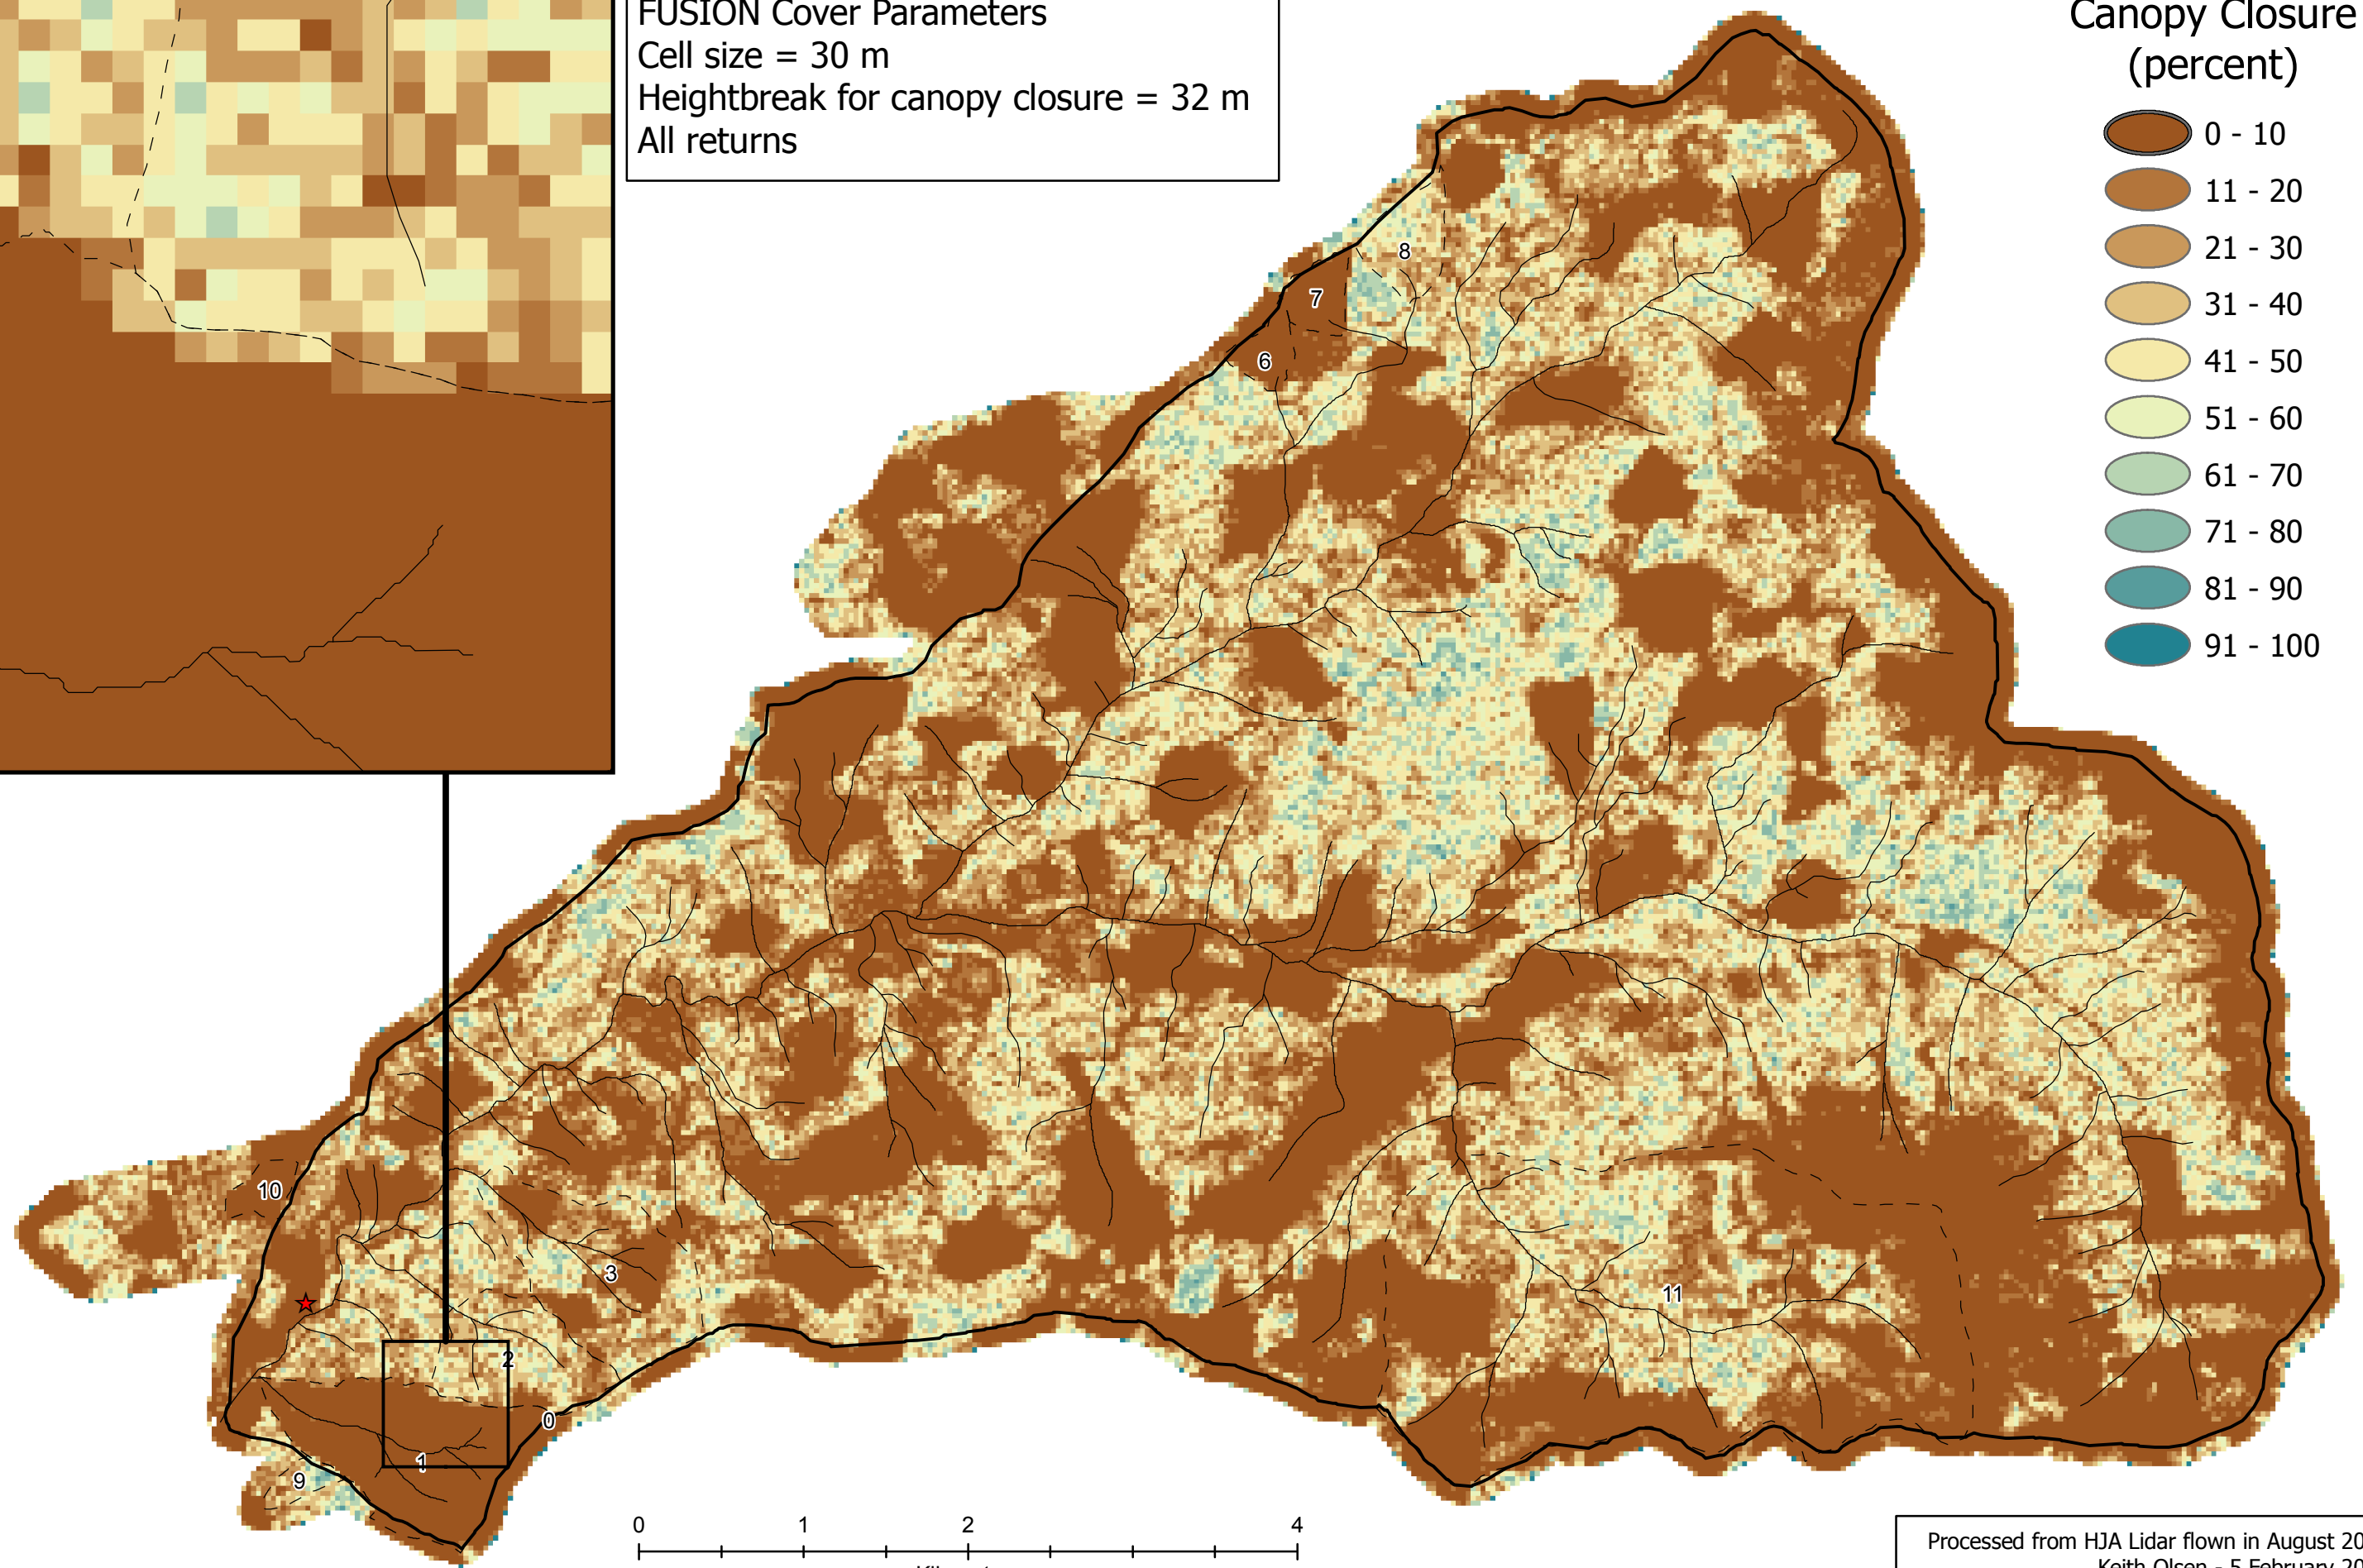

Processed from HJA Lidar flown in August 2008
Keith Olsen - 5 February 2010
Universal Transverse Mercator, zone 10, NAD83

FUSION Cover Parameters
Cell size = 30 m
Heightbreak for canopy closure = 32 m
All returns

Canopy Closure (percent)

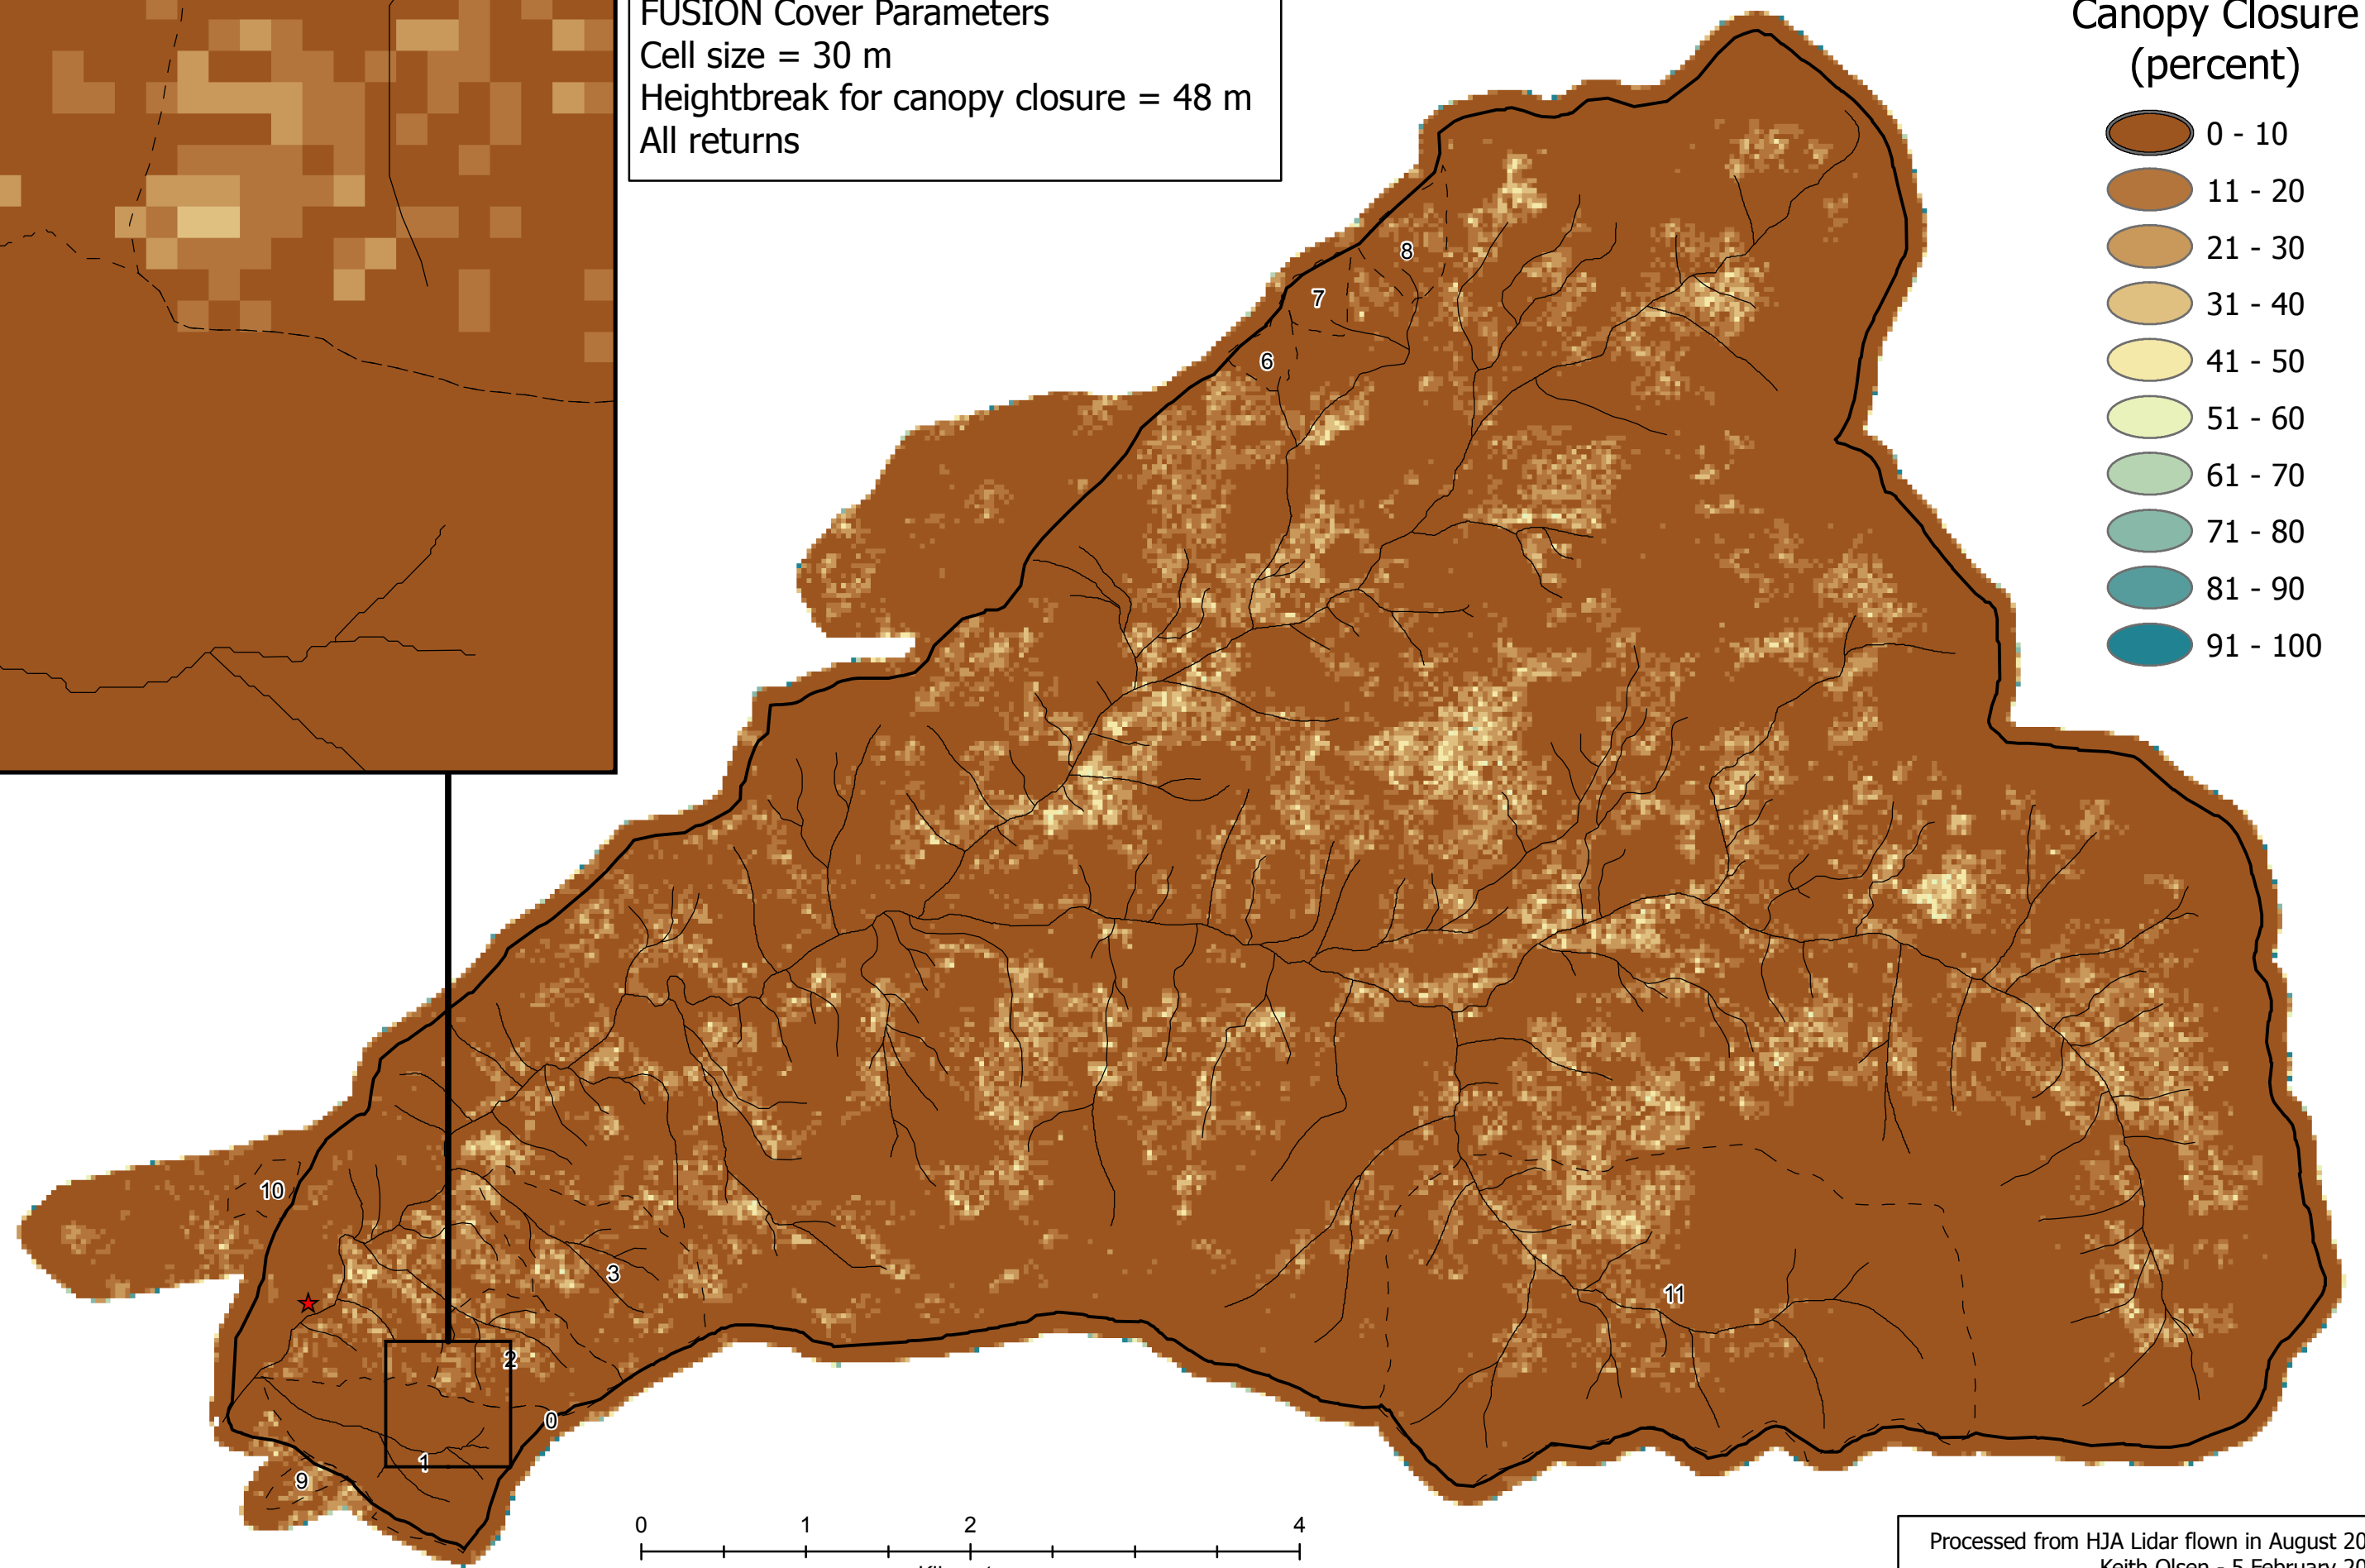

Processed from HJA Lidar flown in August 2008
Keith Olsen - 5 February 2010
Universal Transverse Mercator, zone 10, NAD83

FUSION Cover Parameters
Cell size = 30 m
Heightbreak for canopy closure = 48 m
All returns

Canopy Closure
(percent)

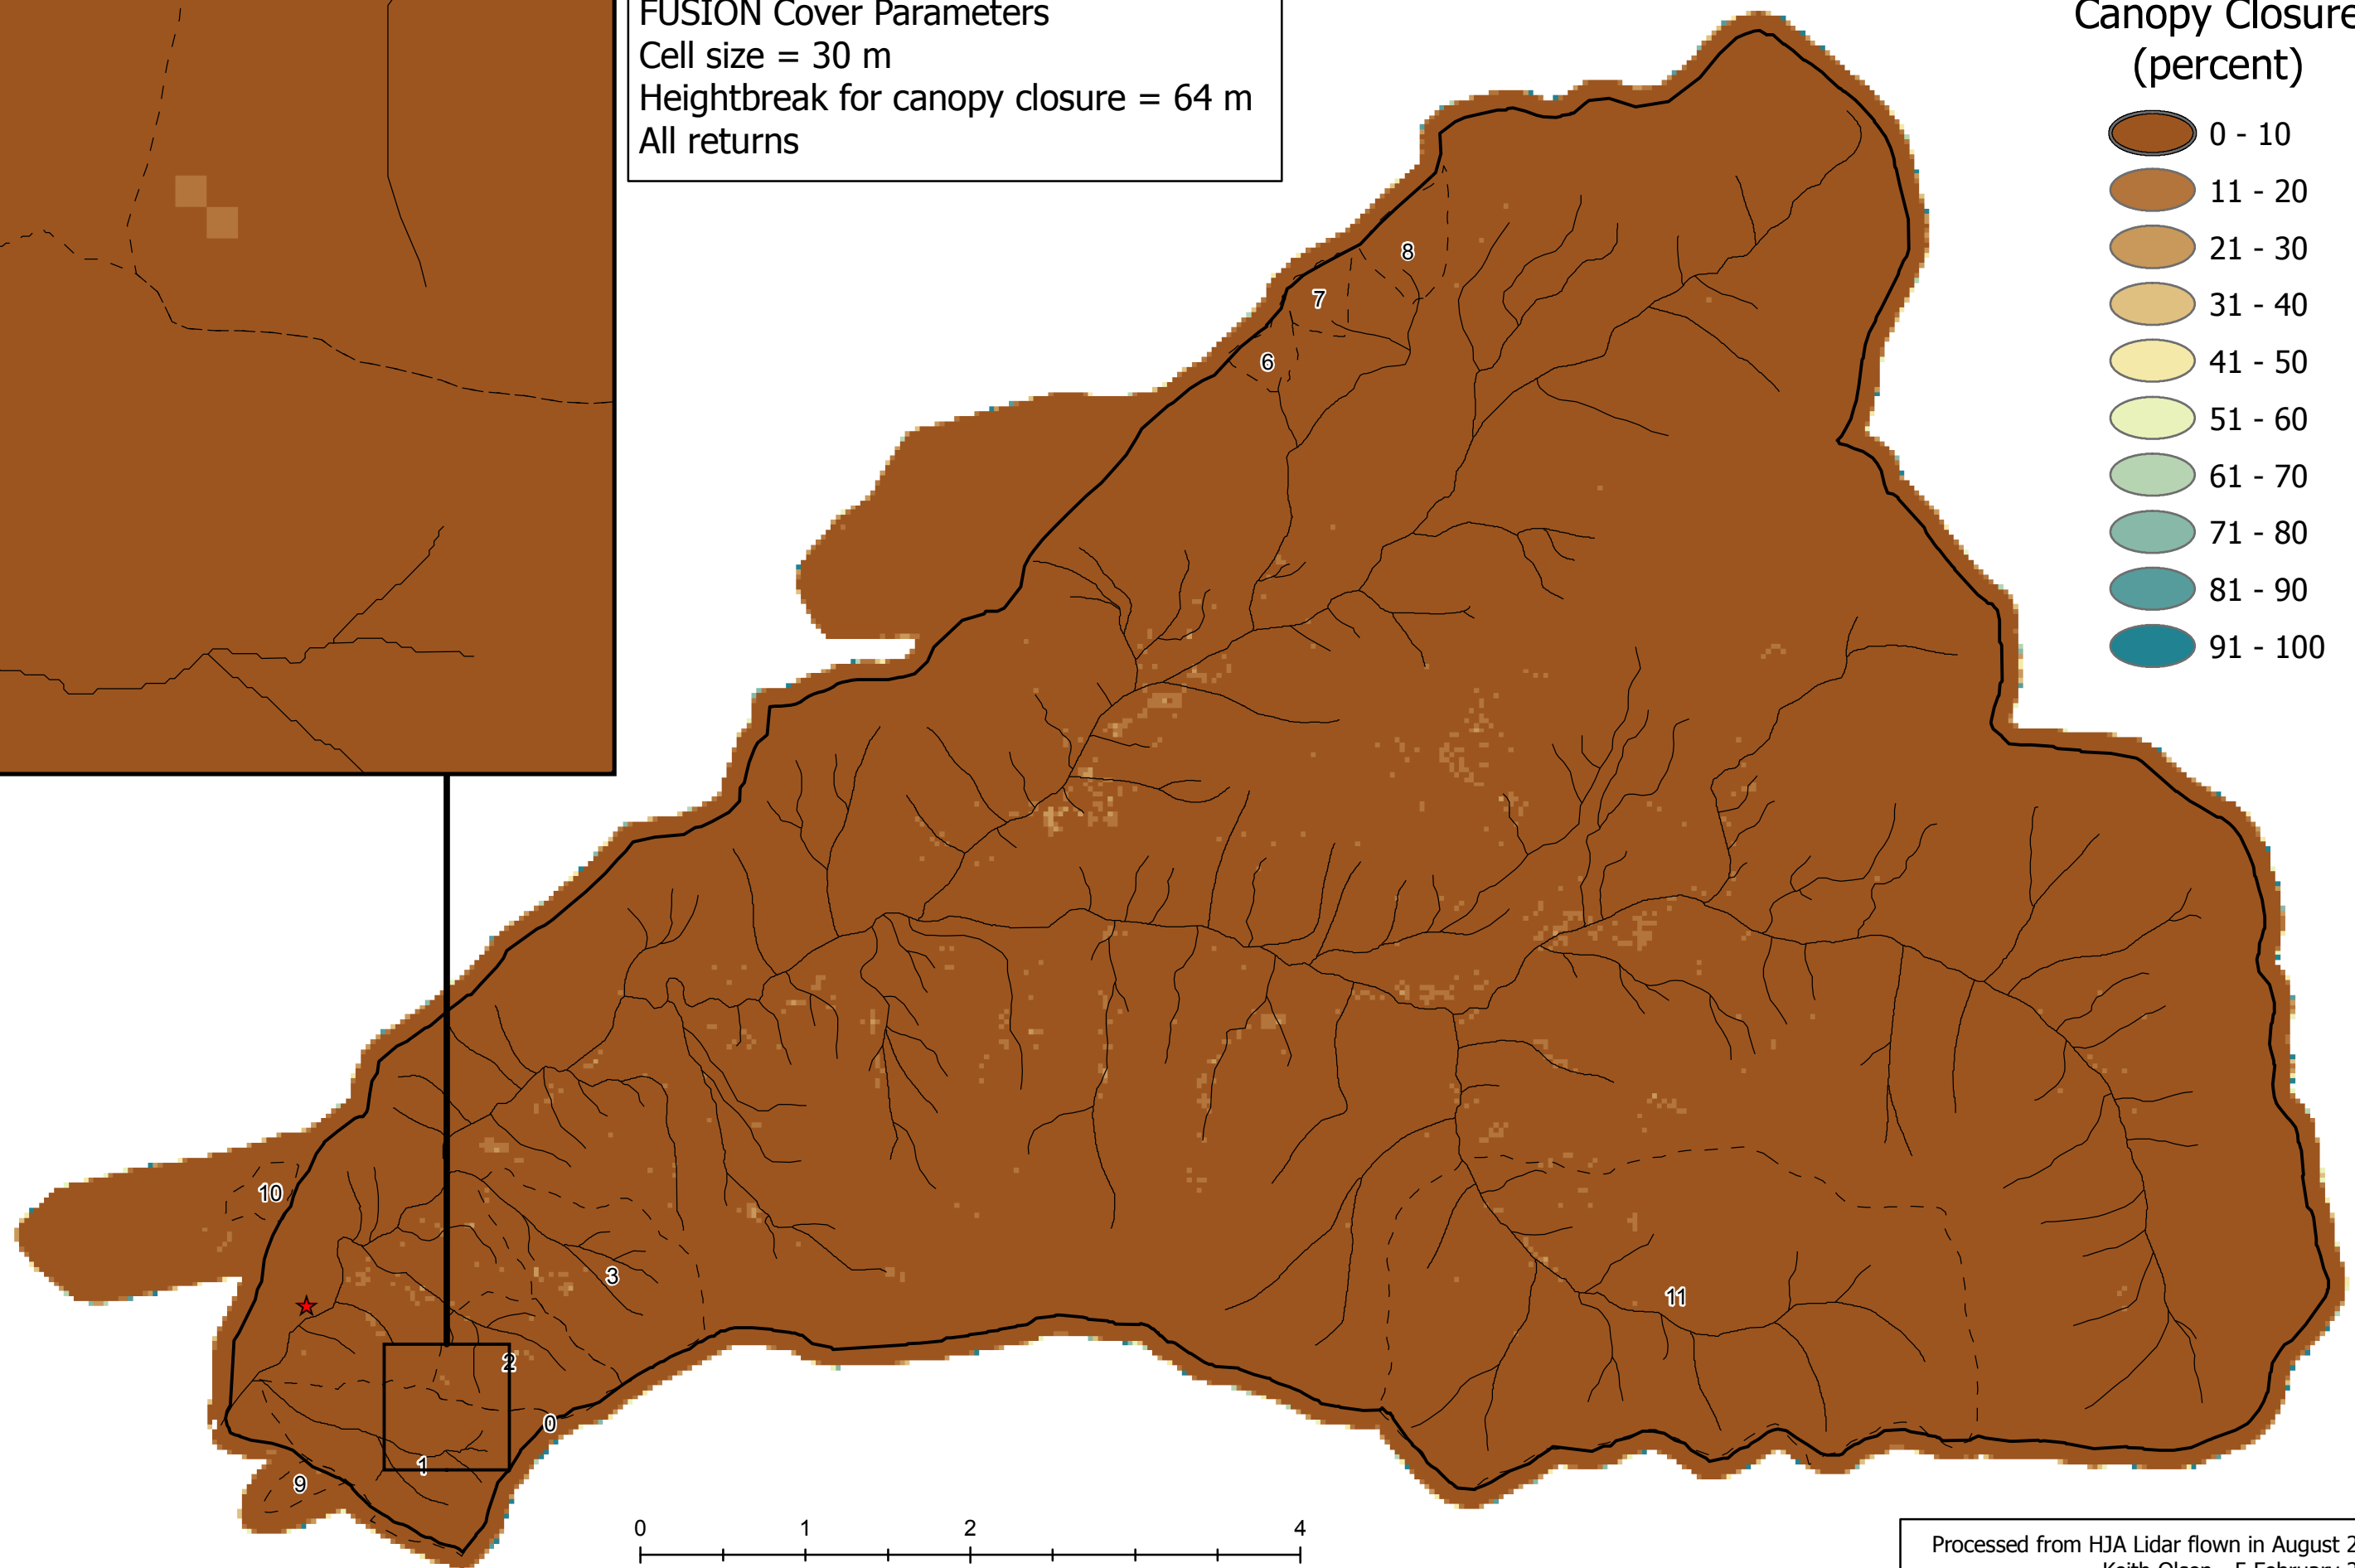

Processed from HJA Lidar flown in August 2008
Keith Olsen - 5 February 2010
Universal Transverse Mercator, zone 10, NAD83

FUSION Cover Parameters
Cell size = 30 m
Heightbreak for canopy closure = 64 m
All returns

Canopy Closure
(percent)

Processed from HJA Lidar flown in August 2008
Keith Olsen - 5 February 2010
Universal Transverse Mercator, zone 10, NAD83
